

sgroi.ga

Build a homepage

Gabriel Sgroi

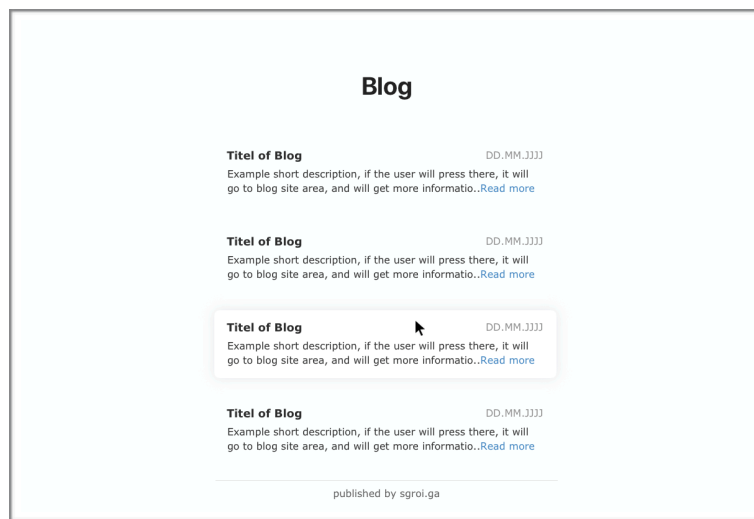

04. March 2018

Website content:

1. Startpage with Link ball
2. Blog
3. Job offers
4. Newsletter
5. About information
6. Multi languages

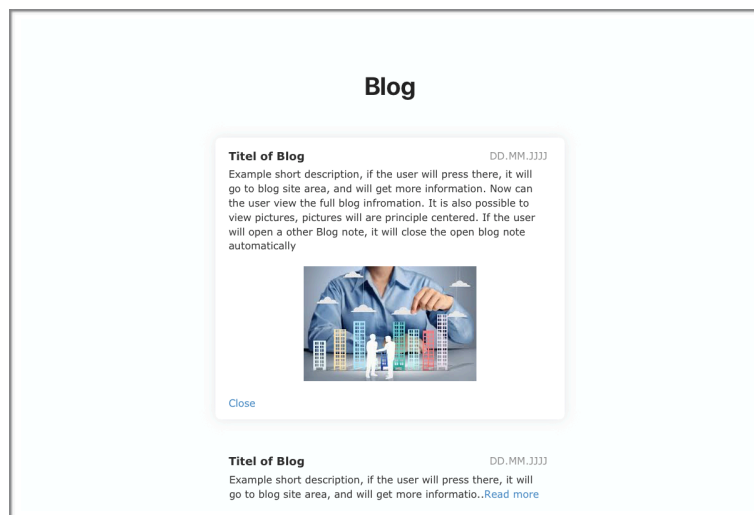

2. Blog

[Download PSD](#)

The next part is a simple Blog with Titel, Date DD.MM.JJJJ and a content preview (two lines) if the user will go with the mouse near the content, it will show like this preview.

If the user will press on the Blog content it will open it like this:

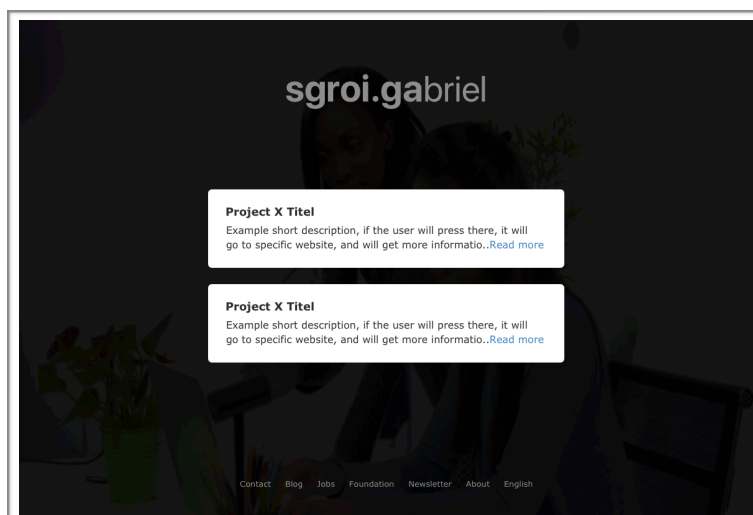

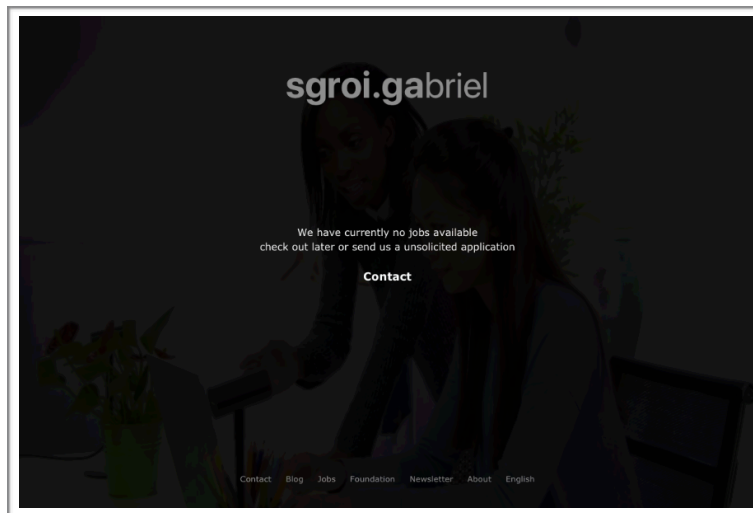

[Download PSD](#)

By press the food line „published by sgroi.ga“ he go back to the main page

3. Job offers

[Download PSD1](#) [Download PSD2](#)

The first page is just if there are no content, then will see the user the own information, if he type „Contact“ it will active the same function like the Contact Button on the food line. If there are a content there, will the user see a titel and a short text information. If he type on the box it will open a Link (It go to a external page that I will to by myself)

The background is a Video, it is this Video: [Link](#)

4. Newsletter

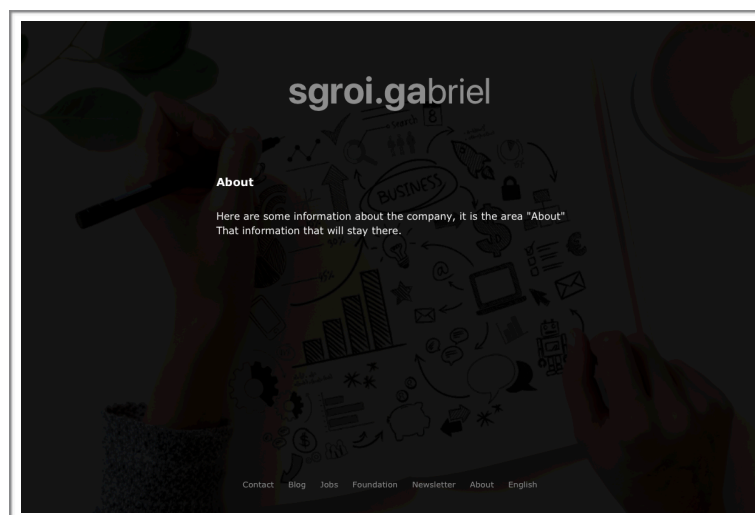

[Download PSD1](#)

For the Newsletter are there a PopUp Window, there are a complete script, it is connect with MailDirect for Mac: [Script](#) so you need just to integrate it, check also this: [Site](#)

5. About

[Download PSD](#)

The last page area is the „About“ part, there are information about the company (simple text) The background is this picture: [view](#)

6. The last part are the language, I will write the content in this languages: German, Italian, English, French and Spanish

So find a solution in the CMS to edit it in the different languages.

Important informations:

- The page will work also for mobile devices (responsiv design)
- As favicon I will use this logo: [view](#)
- The food line will looks white if the user go with the mouse near there
- Find a solution that search machine like google don't find this website!
